

Prem Ranjith Varma K

Network Security Analyst | Cybercrime Intervention Officer

Bangalore, India • +91 9019246650 • kpremranjithvarma@gmail.com

[linkedin.com/in/prem-ranjith-varma-k-b197bb370](https://www.linkedin.com/in/prem-ranjith-varma-k-b197bb370)

PROFESSIONAL SUMMARY

Motivated and detail-oriented entry-level Network Security Analyst and Certified Cyber Crime Intervention Officer (CCIO) with 1+ year of hands-on experience in cyber threat intelligence, network security monitoring, digital forensics, and incident response. Proficient in industry-standard SIEM platforms including Splunk, IBM QRadar, and Microsoft Sentinel. Skilled in vulnerability assessment using Nessus, Qualys, and Burp Suite. Experienced with scripting in Python, Bash, and PowerShell for security automation. Applies MITRE ATT&CK, NIST CSF, and ISO 27001 frameworks to real-world threat analysis and mitigation. Adept at collaborating with law enforcement, security teams, and stakeholders to strengthen organizational cyber resilience.

CORE COMPETENCIES

Network Security | Firewall Management | Threat Intelligence | Incident Response | Digital Forensics | Vulnerability Assessment | SIEM Operations | Intrusion Detection | Log Analysis | Cybercrime Investigation | Risk Management | Security Frameworks | Penetration Testing Fundamentals | Endpoint Security | Compliance Monitoring

WORK EXPERIENCE

Cyber Crime Intervention Officer

Information Sharing and Analysis Center (ISAC) | Bangalore, India | January 2024 - Present

- Monitor and analyze cyber threat intelligence feeds using Splunk and QRadar to identify emerging cybercrime trends and coordinate timely stakeholder intervention, reducing threat escalation incidents.
- Investigate cybercrime incidents end-to-end by collecting and preserving digital evidence, analyzing suspicious network activities, and supporting legal and forensic mitigation efforts.
- Facilitate structured information sharing between internal security teams, law enforcement agencies, and external organizations to improve collective cyber threat awareness and incident response strategies.
- Perform SIEM-based log correlation and network traffic analysis using Microsoft Sentinel to detect anomalous behaviors and potential security breaches across enterprise network infrastructure.
- Apply MITRE ATT&CK and NIST frameworks to classify threat actors, map attack vectors, document TTPs, and support development of incident response playbooks and standard operating procedures.
- Execute vulnerability assessments using Nessus and Qualys on internal systems, producing risk-ranked reports and coordinating remediation with system owners to reduce organizational attack surface.
- Develop PowerShell and Python scripts to automate log parsing, alert triage, and security reporting tasks, reducing manual analyst effort by streamlining repetitive SOC workflows.

TECHNICAL SKILLS

SIEM Platforms: Splunk, IBM QRadar, Microsoft Sentinel

Vulnerability Scanners: Nessus, Qualys, Burp Suite

Scripting Languages: Python, Bash, PowerShell

Security Frameworks: MITRE ATT&CK, NIST CSF, ISO 27001, OWASP

Network Security: Firewalls, IDS/IPS, VPN, TCP/IP, DNS, DHCP, Network Traffic Analysis

Digital Forensics: Evidence Collection, Chain of Custody, Log Analysis, Incident Documentation

Operating Systems: Windows Server, Linux (Ubuntu, Kali Linux), macOS

Tools: Wireshark, Metasploit (awareness), Nmap, Active Directory

CERTIFICATIONS

- CCIO - Certified Cyber Crime Intervention Officer | Information Sharing and Analysis Center | 2024
- CompTIA Security+ | In Progress | Expected 2025
- MITRE ATT&CK; Fundamentals | Completed | 2024
- Python for Cybersecurity | Completed | 2023

EDUCATION

Bachelor of Engineering - Computer Science and Engineering

Sri Siddhartha Institute of Technology | Tumkur, Karnataka, India | Expected 2027

- Relevant Coursework: Network Security, Cryptography, Ethical Hacking, Operating Systems, Database Security, Computer Networks, Information Security Management
- Academic Projects: Network intrusion detection system, secure web application development, firewall configuration lab

PROJECTS

Network Traffic Anomaly Detection Lab

- Designed and executed packet capture and traffic analysis using Wireshark to identify port scans, ARP poisoning, and unauthorized access attempts in a controlled virtual environment.

Vulnerability Assessment and Remediation Simulation

- Performed Nessus-based vulnerability scans across a virtual lab network of 10+ hosts, documented CVE findings by severity, and proposed NIST-aligned remediation plans reducing critical vulnerabilities by 80%.

Python-Based Security Automation Tool

- Built Python scripts to automate syslog parsing, threshold-based alerting, and daily security summary report generation, saving approximately 2 hours of manual SOC analyst effort per day.

PROFESSIONAL ASSOCIATIONS

- Member - Information Sharing and Analysis Center (ISAC) | 2024 - Present
- Student Member - (ISC)2 | 2023 - Present

LANGUAGES

- English - Professional Proficiency
- Kannada - Native
- Telugu - Native
- Hindi - Conversational
